### Project Scope

Construction of Herman Miller's New HQ and distribution centre began in 2014, being the biggest single investment in the town, and creating 200 jobs in the local area.

The 170,000 sq metre warehouse project required Topakustic Timber 14/2m Sound Absorption panels to be fitted to the walls of the office area, meeting rooms, restaurant and general circulation space. The acoustic wall panels were specified for innovative design and high sound absorption acoustic performance.

The Topakustic timber wall panels are either slotted or grooved, providing impeccable sound absorption performances, but also ensuring a high class aesthetic finish and feel with a choice of timber types and finishes.

Herman Miller provide "Class A" products and are renowned for great quality and therefore required a sound absorption solution to comply with their own brand style. Topakustic fitted perfectly to the Herman Miller specification throughout the installation space being treated and installed by UK Acoustic Systems Ltd.
