Project Scope

As part of UK Acoustic Systems' ongoing work installing high-quality acoustic flooring at various Premier Inn's around the UK, we were brought on to provide acoustic flooring to their Penrith site, one of Premier Inn's many new sites across the UK.

Due to it's service and close proximity to the Lake District, this hotel has become extremely popular in just a short period of time.

Just like a number of our other Premier Inn installations, we installed Knauf Brio 23WF acoustic flooring to the 1st and 2nd floors. This superb system provides excellent levels of soundproofing while being used in a shallow floor build up.

We also installed Knauf Polyfoam Floorboard Extra on the ground floor with a 22mm T&G chipboard overlay, maximising durability for the increased footfall.

The Knauf products we're a hit in reducing the overall noise within the hotel, allowing Premier Inn to fulfil it's promise of a good night's sleep. This installation proved to be a great success, reducing the noise levels within the building and helped ensure the most comfortable stay possible for guests.
