Project Scope

University of Northampton campus is split up into several learning blocks. Within the several blocks, UK Acoustic Systems was tasked with installing an acoustic lining system into the majority. Including; Creative Hub, Learning Hub, Research & Enterprise Hub, and Engine Shed.

Included in the Acoustic Lining package were a multitude of acoustic systems and finishes to create a dynamic yet acoustical stable atmosphere within the campus. Systems included; CMS Superphon Acoustic Wall Panels, MDF Lattes, Lamaphon CLS1 Ceiling, DecorLinear Timber Veneer Wall Panels, SonoFlex Soundwaves Scrunch or Botanic and an Acoustic Spray Plaster Ceiling System.

The combination of a seamless acoustic spray plaster in conjunction with the dynamic acoustic timber veneer wall slats and acoustic fabric panels brought depth and character to the atmosphere.

Including such sound absorption products in the large open spaces, helps minimise the amount of noise reverberation. Helping create a calmer environment. With the UK Acoustic Systems' range, we will be your one stop provider, in all absorption solutions. Whether it be polyester or cement. Our Absorption range helps you create a calmer environment, without compromising on aesthetics.
