Project Scope

The University of the West of Scotland's launched ambitious plans to relocate into a new £110m campus in Lanarkshire, 2 miles away from the current Victorian building.

The relocation of the campus was tasked to achieve a modern new build environment, "to develop a truly inspirational and world-class University campus fit for existing and future students." - Prof Craig Mahoney, Principal

[Soundis Absorb-R WoodTec Wall Slats](#) was specified for their acoustical performance of Class A NRC and robust material. The WoodTec Wall Slats are based on a fibre gypsum board which has excellent properties regarding both fire safety and acoustics.

The slats are less sensitive to changes in temperature and humidity which results in 100% straight aligned slats over their full lifetime, regardless of humidity and temperature changes.

UK Acoustic Systems installed the [WoodTec Wall Slats](#) in the main foyer wall. In addition to the purely functional benefits to sound quality, the installation has been described as a work of art in its own right.
