

Project Name

ARTS CENTRE

Location

Arts Centre, Warwick University

Contractor

Wilmott Dixon

System Installed

Black Acoustic Fabric Panels
Acoustic Flooring System

Art Centre, Warwick University

The Warwick Arts Centre involved a complete upgrade to the original building as well as adding a new-build that houses three HD digital auditoria, a large ground floor gallery to exhibit contemporary art, sculpture and photography, plus a spacious new-look foyer. UKAS were contracted to install an Acoustic Fabric panelling system to reduce reverberation and an Acoustic Flooring system to provide anti vibration within three Auditorium Centres.

PROJECT SCOPE

Within all three of the auditoriums of the newly constructed Arts Centre at Warwick University UK Acoustic Systems installed Soundis Systems providing solutions to both the Sound Absorption and Soundproofing requirements.

In relation to the Sound Absorption we installed Soundis Absorb-R SofTone Panels (commonly known as acoustic fabric panels) These were installed on both the side walls along with the back wall of each auditorium providing full coverage of the walls enhancing the performance of the product improving the clarity of sounds emitted within the auditoriums.
