

Project Name

TABERNER HOUSE

Location

Taberner House, Croydon

Contractor

Henry Construction

System Installed

Sound-is Cradle and Batten System

Taberner House

UKAS installed a Sound-is Cradle and Batten System.

A huge regeneration project site emerged in Croydon which involved the construction of 514 apartments.

The whole project covered approximately 34,000 square meters including ground floor retail and office space.

PROJECT SCOPE

UK Acoustic Systems installed a Soundis Cradle & Batten system on all 4 tower blocks which make up the 34,000m2 development.

This system was installed directly on the concrete subfloor and was chosen due to its acoustic performance incorporating levelling capabilities.

The Cradle & Batten system helps to improve both airborne and impact performance and is compliant with Robust Detail FFT2.
